Ongoing Assessment of Materials for Drinking Water Applications

We would like to proactively inform you about an ongoing evaluation concerning our product materials, in line with current and upcoming regulatory requirements for drinking water applications.

Following our internal alignment, we are assessing the feasibility of transitioning to LSR or EPDM (as an alternative to NBR and others materials) in order to support compliance with REG4 (BS 6920) and Drinking Water Directive (DWD) 2020/2184/UE requirements for future approvals.

This evaluation is part of our continuous commitment to ensuring the highest standards of quality, safety, and regulatory compliance across our product range. The assessment will include material performance, certification implications, and potential impacts on production and approval timelines.

At this stage, no immediate changes to current products or supply conditions are expected. However, please note that any future material transition may result in price adjustments, due to differences in raw material costs as well as additional certification and compliance requirements. We will keep you informed and provide a detailed update, including timelines and any relevant actions, as soon as the evaluation is completed. Should you have any questions, please do not hesitate to contact us.

Best regards
