IRRIGATION

Irrigation Series

6th SERIES connect'eedy

The 6th Series Connect'eedy has been designed to offer a **quick assembly** and installation in a **compact size** and with an **excellent performance**.

This new type of manifold is a special modular "T" solenoid valve for irrigation boxes.

The benefit is the possibility to **assemble the valves directly with each other**, without the use of the classic manifold; this mechanism allows to significantly reduce the installation time and the necessary materials.

The 6th Series is equipped with rings already integrated on the inlet (1" Female) and outlet (1" Female) towards the area to be irrigated; the valves are connected to each other through the thread (1" Male). There is the end line cap.

Manual bayonet opening by the classic solenoid with yellow ring.

APPLICATIONS

Valve box

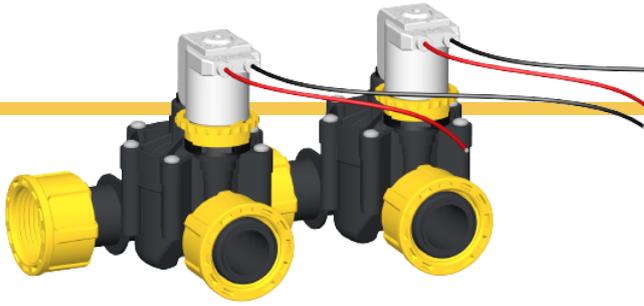

Gardens

Sport facilities
